

**Study Title:**  
**Quantitative suspension test for evaluation of virucidal activity  
in the medical area (Phase 2 Step1)**

Microbiological Solutions Limited (MSL)  
Gollinrod, Walmersley, Bury, BL9 5NB, UK

Customer: Reabrook Ltd  
Contact name: Neil Hembury  
Email:  
Address: Rawdon road, Moira, Swadlincote, Derbyshire, DE12 6DA  
PO/Quote number: Q002659

Megan Barrett  
Laboratory Manager

Peter Thistlethwaite  
Technical Projects Manager

The test results on this report refer only to the items tested as supplied by the customer. This report shall not be reproduced except in full and with written approval of Microbiological Solutions Ltd. All reports are archived for a minimum of 2 years. The sample will be retained for 1 month unless otherwise requested in writing.

**Scope**

The standard method BS EN 14476 describes a test method and the minimum requirements for virucidal activity of a chemical disinfectant and antiseptic products that form a homogenous physically stable preparation when diluted with hard water – or in the case of ready to use products that are not diluted when applied, - with water. Products can only be tested at a concentration of 80% (97% with a modified method for special cases) as some dilution is always produced by adding the test organisms and interfering substances. This European Standard applies to products that are used in the medical area in the fields of hygienic handrub, hygienic handwash, instrument disinfection by immersion, surface disinfection by wiping, spraying, flooding or other means and textile disinfection.

This European standard applies to areas and situations where disinfection is medically indicated. Such indication occurs in patient care, for example: In hospitals, in community medical facilities and in dental institutions or in clinics of schools, of kindergartens and of nursing homes, and may occur in the workplace and in the home. It may also include services such as laundries and kitchens supplying products directly for patients.

**Outline of Test Method (Obligatory Test Conditions)**

A sample of the test product is diluted in synthetic hard water in products diluted at point of use or water in the case of ready to use products is added to a test suspension of viruses in a solution of interfering substance. The mixture is maintained at one of the temperatures and contact times specified in the standard. At the end of this contact time, an aliquot is taken; the virucidal action in this portion is immediately suppressed by a validated method (dilutions of the sample in ice-cold cell maintenance medium). The dilutions are transferred into cell culture units either using monolayer or cell suspension. Infectivity tests are done either by plaque test or quantal tests. After incubation, the titres of infectivity are calculated according to Spearman and Käber or by plaque counting. Reduction of virus infectivity is calculated from differences of lg virus titres before (virus control) and after treatment with the product. The standard minimum spectrum of test organisms is Poliovirus, Adenovirus and Murine Norovirus.

**Acceptance Criteria**

The product when tested as above shall demonstrate at least a 4 log<sub>10</sub> reduction against the test virus. The test is deemed valid where all control requirements are met.

Test information		Deviation
Name of Product	Air Con Cleaner	/
Batch Number & Expiry Date	ONS001/03	
Date of Delivery	13/05/2020	
Period of Analysis	29/05/2020-02/06/2020	
Manufacturer / Supplier	Reabrook	
Storage Conditions	Ambient	
Appearance of the Product	Yellow Liquid	
Neutralisation Method	Dilution	
Product Diluent	Distilled water	
Test Concentrations	Neat (80%), Mid-range (50%), Non active (0.1%)	
Experimental Conditions	Clean	
Interfering Substance	Clean 0.3g/l Bovine Albumin	
Test Temperature	20°C ± 1°C	
Temperature of Incubation	37°C ±1°C	
Identification of the Viral Strains:	Modified vaccinia virus Ankara (MVA), ATCC VR-1508	
Contact Times	5 minutes ± 10s	
Stability and Appearance During Test	No Change Observed	

**Deviations from Standard Method**

There were no deviations from the standard method

**Test Result Summary**

The test product received has achieved a 4-log reduction against Vaccinia virus, when tested under the condition stipulated in this report.

*See page 2 for acceptance criteria and raw data tables below for complete test results.*

Summary Vaccinia virus

Controls					
Conditions	Concentration	Contact time	log TCID50	log reduction	Control validation
Virus control (water)	N/A	5 minutes	8.00	N/A	Validated
